

Westinghouse

Alpha Power α^{Power}
Series Busway

Leading The Future of Electrification

- A Global Heritage Brand with 130 Years of Product Innovation
- Perfect Products, Creative Services, and Competitive Price

**Since 1886,
Westinghouse
Has Brought
The Best
To Life.**

Westinghouse remains a trusted name globally in consumer and industrial products. Built on a heritage of innovation and entrepreneurial spirit, Westinghouse products were the first to supply the United States with AC electric power, transmit a commercial radio broadcast and capture man's first step on the moon. Today, Westinghouse continues to grow its diverse portfolio with a wide range of product categories that include home appliances, consumer electronics, lighting and power generation.

Scope of business**Main Products**

Manufacturing & distribution of electrical products for industrial and household application.

MCB

Product Code

Product Introduction

Product Feature

Aluminum alloy housing

- Alpha Power busway adopts two-pieces aluminum alloy housing, which is light in weight and high in mechanical strength; effectively avoids the influence of eddy current and hysteresis loss, suitable for various application.
- The all-aluminum housing has excellent electrical conductivity, providing much higher grounding capacity than the copper/aluminum bar (50% of the phase bar).
- The unique “serrated surface” design of extruded aluminum housing greatly improves the heat dissipation for the whole busway system.
Special surface treatment helps the housing to withstand 2000-hour of salt spray test;
- The Alpha Power busway provides more reliable IP protection than the traditional design.

Conductor

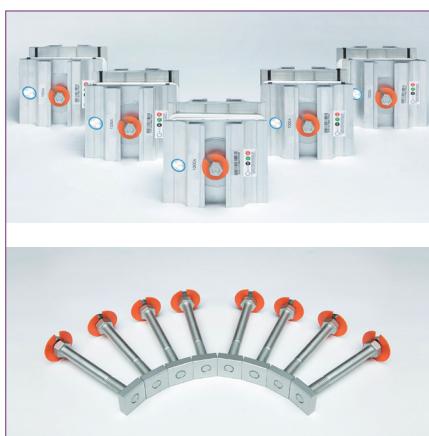

- High-speed sawing machine offers a high sawing accuracy, make smooth cut without issues like deformed, stretched, inconsistent flat end, as a result the temperature rise at the busway joint is decreased.
- The bus bar adopts high quality of copper and aluminum conductor with less power losses by 3~5%.
- The high purity conductors are treated by unique technique, the composition of the trace element being under control. The treatment process in tin plating (silver as option) also gives the benefit of much lower contact resistance.

Tap off unit

- A mechanical interlocking between the specialized pin lock mechanism and the box to prevent the plug box from being inserted and extracted with load, effectively ensuring the safety and reliability of power operation.
- The pins are made of high-quality shaped copper molded at one time. Sample testing with insertion and extraction will be made for the pins to ensure the permanent clamping force after power-on, ensuring the reliable operation of the tap off unit.

Unique joint design & Temperature rise indicator

- Joint insulator with a convex-concave groove edge provides an increased creepage distance.
- Color-coded-temperature indicator applied at busway joint is to give an early warning when high temperature occurs at the joint.
- Single bolt joint design is applied to shorten the time of connection by 50% than the traditional design.
- Double headed "break off" joint bolt is applied to tighten the busway with just a common 16mm socket wrench. Belleville spring washers are adopted to ensure pressure evenly applied across the joint.

Superior & Reliable insulation

Compact outlet

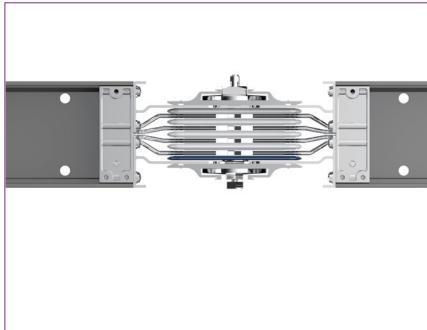

- No bending at the outlet, and the busway is full-length compact. Low impedance, which makes lower voltage drop and less line loss of the busway system.
- Fast heat dissipation and large tapping capacity make the tapping current more safe and reliable.

With proper structure, attractive appearance and the high protection class.

Product Introduction

Product Feature

Proof for wrong-phase

- A unique error-proof device is designed to prevent potential damage on bus bar due to incorrect connection. With this unique device, the installers can not connect two sections of busway successfully with incorrect phase orientation. Bridge type joint, each joint allow $\pm 8\text{mm}$ liner adjustment.

“Sandwich”conductor structure

- The conductors are arranged densely in the housing, achieving the performance of superior heat dissipation, lower temperature rise and elimination of "chimney effect". Current-carrying capability is not affected by different installation sites or methods. This compact structure has a width of only 125mm, occupying smaller building space.

Standard

W Power busway conforms to the following standards:

- IEC 61439-1:2011
- IEC 61439-6:2012
- IEC 60529-1:2001

Electric Parameter

Short-circuit ratings

The ratings shown below are UL recognized rms symmetrical amps. Tests were run per UL 857 standards.

The system can comply with IEC61439 for short circuit withstand test at 1 Second.

Rated short circuit withstand current

Copper	(RMS Symmetrical, KA)
Current	1 Sec.
400A	30

Dimension

Straight length

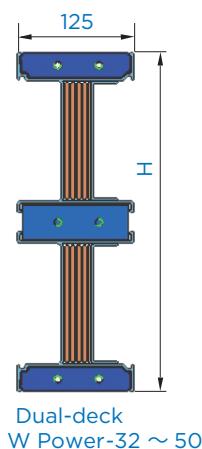

Feeder, the straight length without outlets, can be installed either horizontally or vertically.

The standard length is either 3000mm or 4000mm.

The minimum length is 460mm.

Dimension

Plug-in straight length

The plug-in busway has a flexible design with optional plug outlets on both sides. A maximum of 5 outlets can be fixed on each side of 3m standard length. The customer may reserve plug outlets for extension in the future when changes occur in terms of the equipment load or busway run. Both base plate and socket cover are set for each plug outlet. Base plate helps to prevent fingers from contacting live conductors (IP2X) by accident, on which the phase sequences of conductors are identified. Socket cover prevents the conductive contacting surface from being contaminated. A pad may be used to keep off dust or moisture.

Standard length is 3000mm or 4000mm. The minimum length is 720mm. The minimum length of L1 (distance from the center of plug outlet to standard end) is 360mm. The minimum length of L2 (distance between the centers of two adjacent plug outlets) is 570mm.

L1=0.36

L2=0.93

L3=1.50

L4=2.07

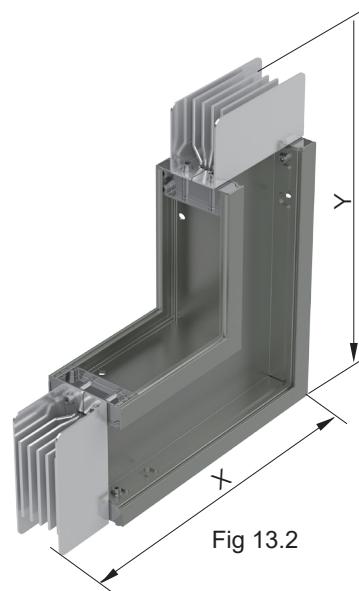

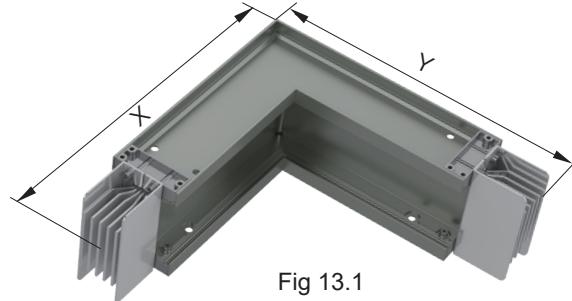

L5=2.64

Standard length:

Alpha Power C: L=1、2、3m Alpha Power A: L=1、2、3m

Optional length:

Alpha Power C: L=0.72 ~ 4m Alpha Power A: L=0.72 ~ 4m

Dimension

Expansion joint

Expansion length is the transition section compensating for thermal expansion, it is normally set each 60m in linear distance.

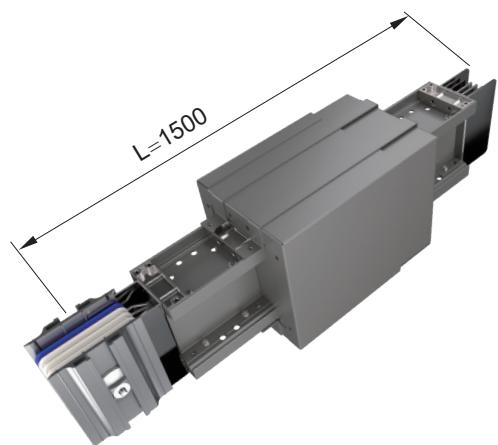

Reducer

This reducer section is used for reducing busbar size to the final load, it provides users with more economic power transmission and distribution method.

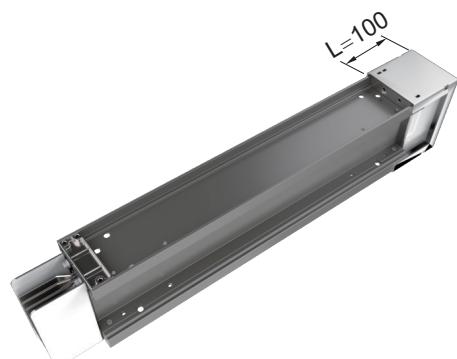

Transposition joint

Transposition section is the transition parts used for changing phase sequence of the busbar; its minimum size is 1500mm. The phase sequence of both sides has to be provided by the customer.

Terminal cover

Tap-off units

Alpha Power tap-off units is adopted to apply electrical power directly to the load from the busway system. Fully considering customer's requirements, Alpha Power bus plug offers the options of circuit breaker or fuse.

Tap-off units with circuit breaker

- Circuit breaker protection can be available with a current range from 16A-1000A.
- Load protection in the box can be 3-Pole or 4-Pole circuit breakers, including accessories of breakers such as rotary handles, shunt release, thermal magnetic release and leakage-current protection module.

Tap-off units

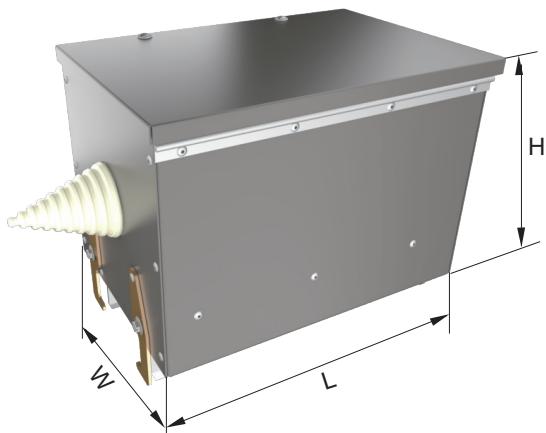

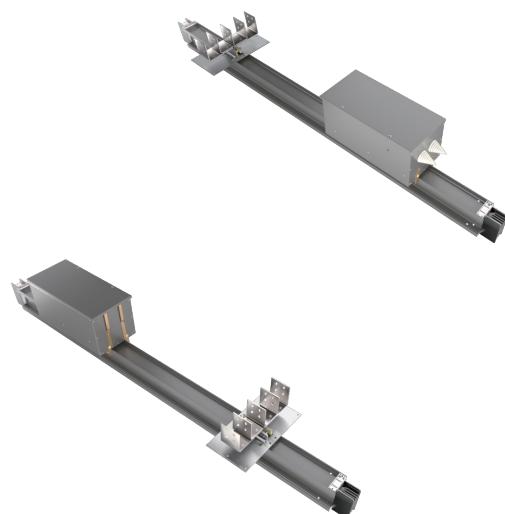

- Tap-off units with fuses can be produced according to customer specifications.
- Unique fail-safe base pins

The plug-in boxes is equipped with a positioning device that prevents incorrect phase installations.

- Plug-in pins

All pins are silver-plated to improve the electrical conductivity.

Protection class up to IP54 with IEC 60529

Plug-in box Dimensions (L×W×H)mm

- For tap-off box over 1000A, please contact the manufacturer.

Current ratings (A)	Plug-in box Dimensions			
	L(mm) Length	W(mm) Width	H(mm) Height	Minimum Height (mm)
100	360	250	255	250
160	400	250	255	250
250	520	270	275	270
400	650	310	315	310
630	800	340	345	340
800-1000	1200	420	355	350

Note:

Table 25-1 size is based on the size of common circuit breaker 3p/4p.

Dimension

End tap box

Alpha Power series busway system tap boxes are used where a run of busway is fed by cable. we offer standard size end tap box (1m×1m×1m) while we also supply with nonstandard box according to the on-site measurement.

Flanged end with end tap box connection

The flange plate can be manufactured according to the size of the end tap box, it can be connected directly with end tap box.

Installation

Protection Class

Alpha Power busway protection class can be up to IP66 according to different applications.

Notes:

IP40---"4" indicates that solid objects greater than 1mm in diameter will not penetrate the housing."0" denotes no protection.

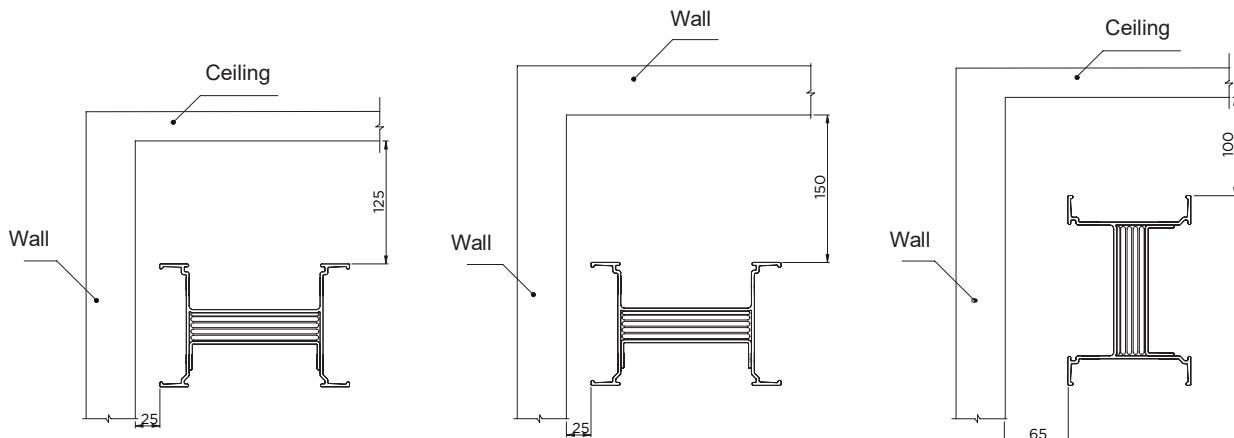

IP42---"4" indicates that solid objects greater than 1mm in diameter will not penetrate the housing."2" denotes prevention of water dripping inside by an angle of up to 15°.

IP54---"5" for dust, "4"indicates splashes of water.

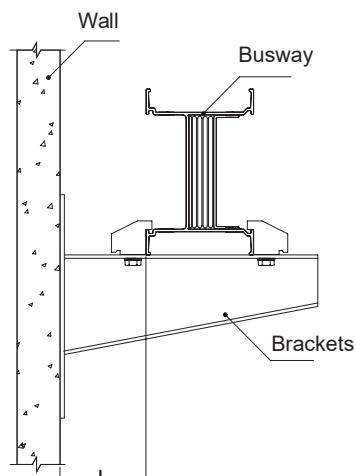

IP65---"6" for dust density, "5" indicates protection from water spray.

IP66---"6" for dust density, "6" for protection of stronger water spray

Minimum clearance required for installation

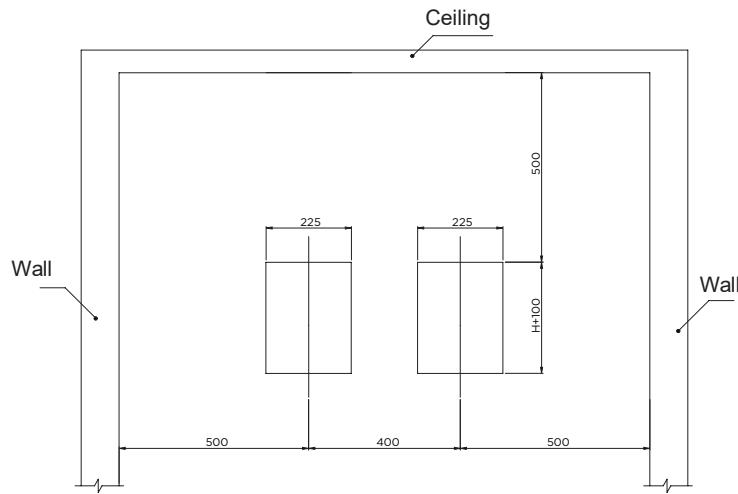

Minimum clearance required for plug-in box installation

Current level for plug-in box	L(mm)
100	150

Installation

Horizontal wall-through installation

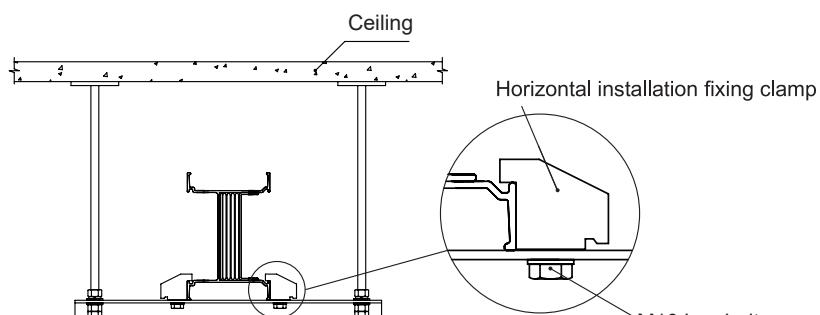

Horizontal installation-trapeze hangers Overhead Support

Holes should be first drilled in the floor so as to inlay steel expansion bolts (holes may also be drilled on site for flexible installation) or pre-bury steel U-channel for welding with hangers. The distance between two adjacent hangers shall not exceed 2m. Please specify any special requirements when placing your order.

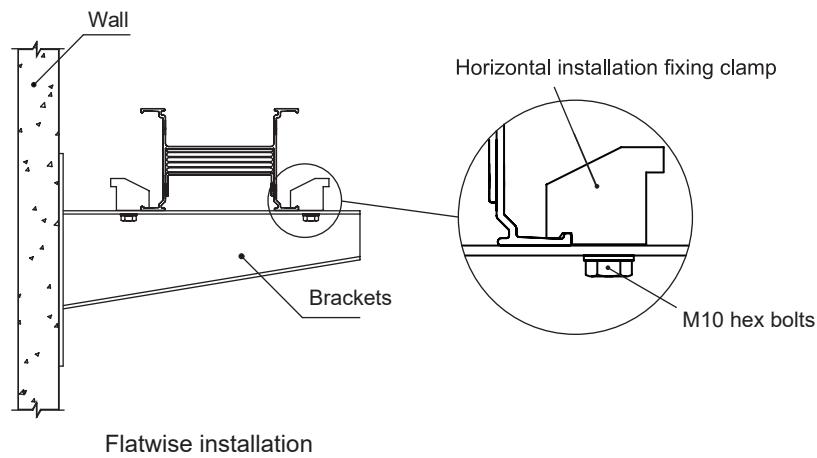

Flatwise installation

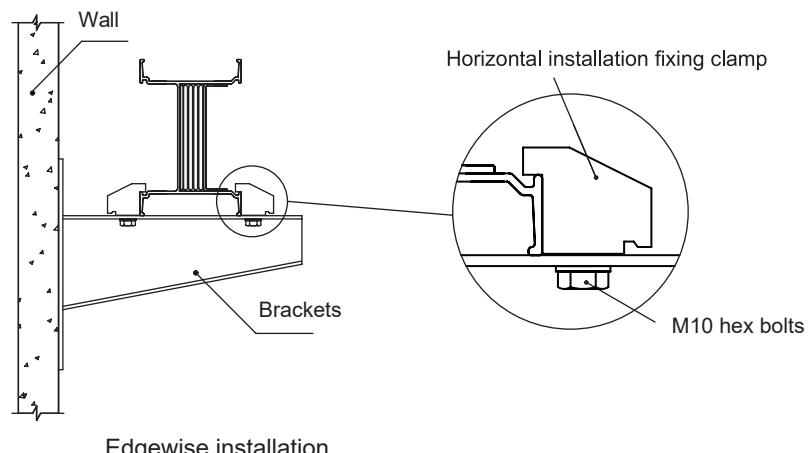

Edgewise installation

Installation

Vertical installation

When installing a vertical bus run, please refer to the figure for the dimension of the access holes. Please ensure that the spacing between every two runs of busway exceeds 350mm, especially if there are two or more vertical runs of busway installed in the same riser. Please refer to the figure below:

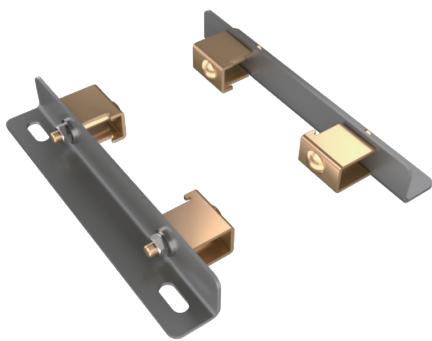

Installation for Vertical Spring Hanger
